### Pullman-Holt HEPA Filter System

**Air Seal Gasket** – Provides tight air seal and prevents leakage.

**HEPA Media** – The filter is made from a single piece of high-grade HEPA media to eliminate the possibility of leaks. The pleats in the media are held open by corrugated aluminum separators for maximum airflow.

**Spacer Sleeve** – The purpose of the spacer sleeve is to space the Dacron bag away from the HEPA filter body so as to utilize the full area of the "Never Clog" Dacron bag.

**Polyester Prefilter** – This impact filter is about one inch thick and is attached to the inlet (bottom) surface of each HEPA filter. Its function is to provide final protection to the HEPA filter from premature failure due to clogging.

**"Never Clog" Filter Bag** – Sheds dirt and debris like a duck sheds water. Shakes clean to maintain maximum airflow.
