

S1400 HEPA Dust Extractor

Creating Clean Air for Construction, Abatement and Restoration

Introducing Ermator's newest HEPA Extractor - Model S1400. Take a quick glance at this revolutionary product and you will be convinced, it's unlike any other vacuum you have ever seen. The S1400 is truly unique. **It is far more efficient for the fast recovery of bulk dry dust, debris and other building materials including volatile, fine wood dust.** It can be connected to electrical power tools to extract freshly cut wood or concrete dust, now considered to be hazardous to the construction, abatement and restoration worker.

The S1400 includes several advanced design features that leapfrog the competition including:

- Transparent tank that houses the Longopac® bag and offers another level of security in the event the bag tears or bursts. Also provides clear indication of the bag's volume contents
- Vacuum equalization system that allows the complete filling of the Longopac bag.
- Built-in pre-separator provides longer running times without interruption and filter cleaning
- Built-in Manometer indicates when pre-filter cleaning is required using Ermator's proven Jet-Pulse filter cleaning system
- Individually tested and certified HEPA filters

S1400 Specifications

Volts:	120
CFM:	138
HP:	2.2
Amps:	13.5
Water Lift:	110
Shipping Weight:	95
Product Code:	200800027C

50 square feet of pre-filter: maximizes air flow, minimizes interruptions and cleans efficiently.

Manometer: measures the negative pressure within the tank and alerts the operator when the filters need servicing.

18 sq. ft. of HEPA Filtration
 Each HEPA filter is individually tested and certified to have minimum efficiency of 99.97%.
